'Caring about city streets is caring about the People who use them. The purpose of this website is to keep the people of Auburn and the surrounding areas informed about the progress of the South Street water main installation and paving project.

We're all very excited to see this project underway. We recognize the people are share holders in this endeavor and our goal with this web page is to provide you with up to date information on the progress of the project. There will be inconvenience through the summer but we're sure you'll agree the work is needed. When the work is complete we'll have a highway that will do credit to our beloved national historic district.

We welcome any suggestions or comments on how we're doing.'

William Lupien, Superintendent of Engineer Services

We can see the light at the end of the tunnel for this season. The water main is complete. All that remains is the final tests and approvals. Once that is done we will do the tie ins for Grover Street and Lincoln Street and install the remaining water services.

We will continue installing new side walk on the corners of the cross-over streets, Blacktopping excavation areas, painting street light poles and placing topsoil and grass seed in the disturbed areas along South Street.

You will be seeing less and less activity as this construction season starts to come to a close.

The work on the water main will proceed in three segments.

1. Metcalf Drive to Chapman Avenue
2. Chapman Ave to Elizabeth Street
3. Elizabeth Street to Lincoln Street

Paving of each segment will begin with in five days of the completion of the water main installation for that segment.

The City, C&S Companies and Rizzo Constructions are all mindful of the historical importance of this area and it's contributions to the character of Auburn.

Road crews who work in construction sites are part of families who need them, just like your family needs you. In the past five years, more than 11,000 people have been injured and more than 80 people have been killed in work zone crashes. This alarming statistic is punctuated by the fact that nearly all of those killed and injured were drivers or passengers traveling through work zones. With this in mind, it is important to drive with extra caution in work zones. Not just for the families who work in construction zones, but for your family too.

Consider this

85% of those killed in work zones are drivers or passengers

Work zone fatalities occur every 7 hours—3 per day

Work zone injuries occur every 15 minutes—143 per day
